A new standard in Enterprise Device Management

The need to build an agile IT framework coupled with the surge in demand for Bring Your Own Device computing has created an urgent need for a tool capable of managing the ever-expanding catalogue of network-connected devices. The simplicity with which tablets, smartphones and personal laptops can access sensitive corporate data means that IT support staff need an effective management system that allows them to control and moderate every device.

Fusion UDM Pro from VXL continues to evolve to meet the challenge. The already intuitive user interface has been further refined to help engineers be even more efficient. And the use of industry-standard technology and software design has helped Fusion UDM Pro become a market leader in the field of enterprise device management.

Fusion UDM Pro – Unifying Your Network

Fusion UDM Pro forms the core of a highly effective management suite, providing you with total control of your IT infrastructure. With Fusion UDM Pro you can manage every networked device from a single management console that runs in your web browser.

As a true enterprise-grade multi device management system, Fusion UDM Pro offers granular control of resources, even across multiple sites. The hierarchical-group architecture approach of Fusion Pro simplifies the creation and administration of permissions, configurations and more – regardless of the type of client device in use.

Fusion UDM Pro also scales seamlessly with the multi-tenancy add-on, allowing IT service providers to manage multi-company IT resources affordably and effectively. Engineers can deliver a world-class service to their customers by helping to protect their fixed and mobile assets remotely.
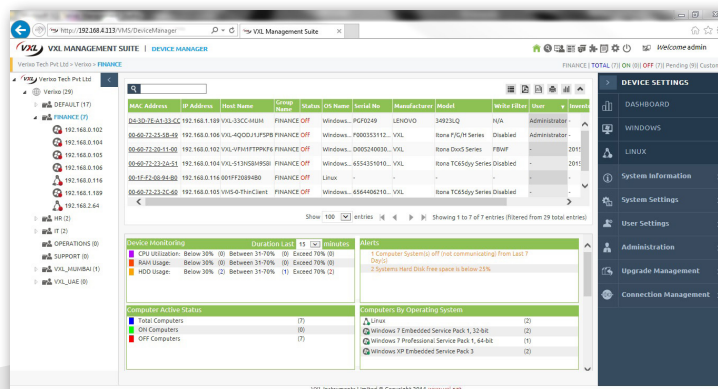

Using Fusion UDM Pro, administrators can manage the complete IT estate, from desktops to laptops, thin clients to kiosks. There is also complete support for a range of Microsoft operating systems, from Windows XP to Windows 8, as well as popular Linux distributions.

Designed for multi-user, multi-disciplinary applications, Fusion UDM Pro has the power and flexibility to manage networks of any size, from tens to tens of thousands of endpoints. Built in scheduling tools allow for automated creation of tasks and profiles on remote devices, simplifying deployment of drive mappings and printer settings for instance. Fusion UDM Pro even executes PowerShell, VBS and shell scripts remotely to further automate network administration, freeing engineers to focus on other issues. And native reporting tools allow administrators to stay informed about network device health, proactively monitoring and alerting them via email or SMS about potential issues that require attention.

Upgrading to Fusion Desktop Premium software provides you with a raft of highly advanced tools that help engineers maintain even greater control and deliver world-class support to their users. Fusion Desktop Premium's advanced deployment, patch management and reporting modules greatly simplify management processes. Fusion Desktop premium's advanced mobile management gives administrators control of the mobile IT estate by providing support for iOS, Android and Windows Phone devices.

Fusion Device Manager – leading edge device management for tomorrow's enterprise today.

Enterprise scalability – device management that grows as you do

Fusion UDM Pro provides enterprise-class device management for businesses of all sizes. From ten to ten thousand devices, the fully scalable hierarchical framework allows you to offer the same level of service to your users regardless.

Simplifying remote device management

Fusion UDM Pro provides A-Grade monitoring for all devices connect to your LAN or WAN. Execute remote commands that tailor your systems within seconds, or deploy new patches and updates with a click.

Assets and liabilities uncovered

Fusion UDM Pro provides complete network visibility, allowing you to manage IT assets and identify devices that pose a security risk. By improving your compliance provisions, Fusion UDM Pro also helps reduce operational costs.

Manage and secure any device

Using agent and agentless discovery techniques, Fusion UDM Pro can be used to manage virtually any network-attached computing device. From Windows servers, to Linux desktops to Android smartphones and Apple tablets, Fusion UDM Pro can handle them all.

Intuitive, easy to use management tools

Discover, register and manage any compliant device. A centralised console allows you to drill-down to a granular level, showing complete details about settings and content of every connected machine. Embedded dashboards and a multi-device VNC Wall can then be used to watch and control multiple devices at a click.

Seamless software deployment

Leverage the power of Fusion UDM Pro's repository technology to deploy new software and updates to individual machines, or in batches – however you need. And our unique TorX™ technology ensures minimal bandwidth usage so critical systems are unaffected during deployments.

Real time software auditing

Fusion UDM Pro's enhanced software and license metering systems collect information about each computer and catalogs the installed applications. An up-to-date network-wide software audit is just a few clicks away.

Complete network visibility

Fusion UDM Pro uses a systematic and easy-to-understand system of device display and organisation to show the hierarchical order of organization sites, groups and devices. A live view of your entire IT infrastructure is available at a glance.

NOTE: Inventory & Patch Management, Mobile Device Management, Agentless Discovery & Deployment, Compliance/Sofware metering are all Premium Edition features. Full details at www.vxl.net . E&OE
